QuickTrav detailed document – how to set up Vat

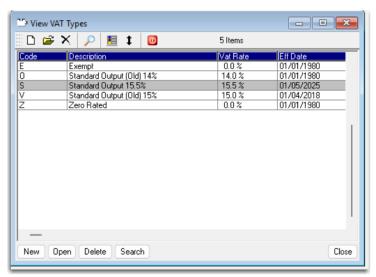

To comply with the increase in the standard rate of Vat in South Africa, all agencies will need to update the Vat % in the Vat tables / setup in the various QuickTrav modules, as below:

The Vat table must be updated immediately after running the April month ends, before processing any new documents.

A: QuickTrav FrontDesk module

Top menu -> Setup\Global Tables\Vat

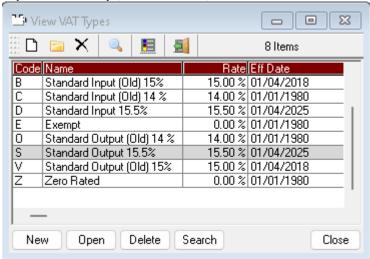

- Change the existing "S" standard Vat rate to 15.5% as follows
- Add a new entry for the old rate (15%) for possible adjustments relating to 15%

B: QuickTrav Service Vouchers module

- Change the existing Standard output / input rates from 15% to 15.5%
- Add a new entry for the old rate (15%) to be used for possible adjustments processed after 1st
 May relating to vouchers before that date.

Top menu -> Setup\Global Tables\Vat

Note: The effective date in the Vat table is merely memo information

C: QuickTrav Carhire Vouchers module

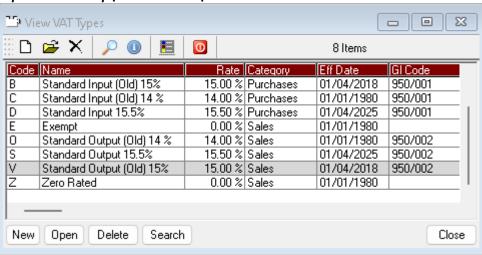

No changes required

D: QuickTrav Invoice module

- Before closing the April month-end, it is very important that all automatic invoicing for imported tickets is completed i.e. all April tickets must be invoiced in April.
- The Vat table must be updated immediately after running the April month ends, before processing any new invoices / credit notes.
- Change the existing Standard output / input rates from 15% to 15.5% and change the effective date to 01/05/2025
- Add a new entry for the old rate (15%) to be used for adjustments processed after 1st May relating to transactions before that date.

i.e. per below

Top menu -> Setup\Global Tables\Vat

Note: The effective date in the Vat table is merely memo information

E: QuickTrav Main module

No changes required

******NB*****

- Care needs to be taken while the main module is still in April, but the invoicing module is in May, as the invoice module's Vat tables have been updated. This will cause transactions (journals, commission receipts, etc) to default to the NEW vat %
- Any such transactions must be captured using the Old Standard Rate Vat code created above. To
 reduce this risk of errors, the main module's April month end should be run as <u>soon</u> as possible
 after the invoicing module's month end.

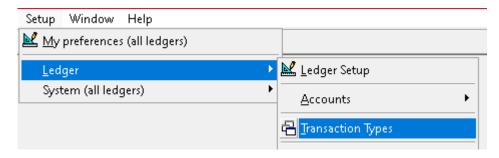

F: QuickTrav General Ledger module

QuickTrav WinGL Vat change 15% to 15.5%

For each ledger that you work on that will contain 2025/05 or later transactions, open the ledger and change the following settings.

When the system prompts you for a password, please use quick

A: Table of transaction types

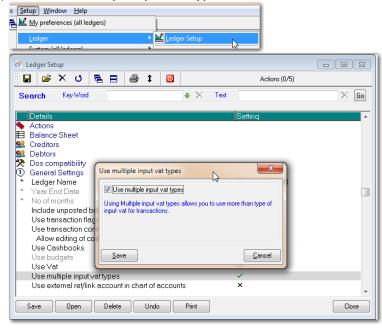

Change the vat percentage from 15% to 15.5% as below

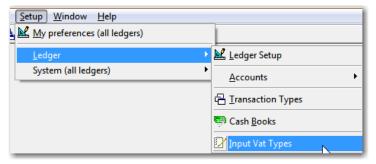

B: Multiple Vat codes

If your ledger year spans periods with different Vat rates e.g. a year ending 28/02/2025 where 15% applies to 2025/03 + 2025/04 and 15.5% from 2025/05 onwards, then you will need to be able to use both rates. To enable this, do the following:

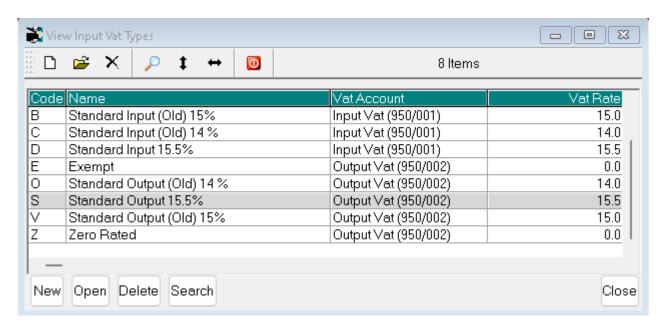

1) Turn on Use multiple input Vat types as follows.

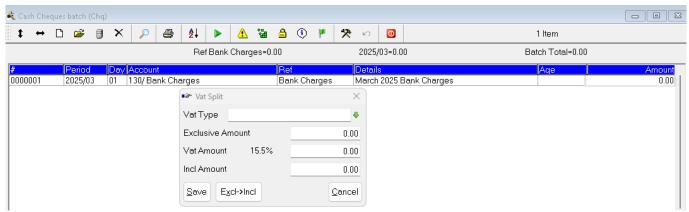

2) Edit the Vat table as follows

Increase the existing S and D Codes vat rate from 15% to 15.5%

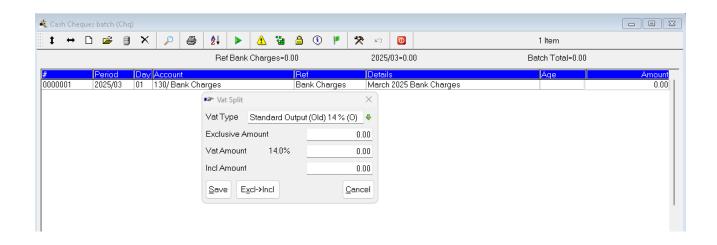

When entering a Vat split in a batch, the rate will always default to the "S" vat table rate, per above 15.5%

If you need to use the old rate, select the old rate from the drown down

In ledger years that do not require more than one Vat rate, the *Use multiple input Vat types* option can be left off / turned off.

NOTES

Version Updates

- It is not essential to update any of the QuickTrav core applications on 1 May 2025.
- New versions of all modules are released regularly to continually improve the QuickTrav software and these should be installed when released
- The new PCI versions that you are / should be running by now will notify you when an update is available. You can also manually check for an update via Top menu -> Help/Check for update
