

QuickTrav™ WebApp Solution

QuickTrav's web-based applications are modern and flexible versions of the existing front-end modules, providing a similar experience, through a web-based platform, for easier and more convenient access.

The WebApp application consist of the following:

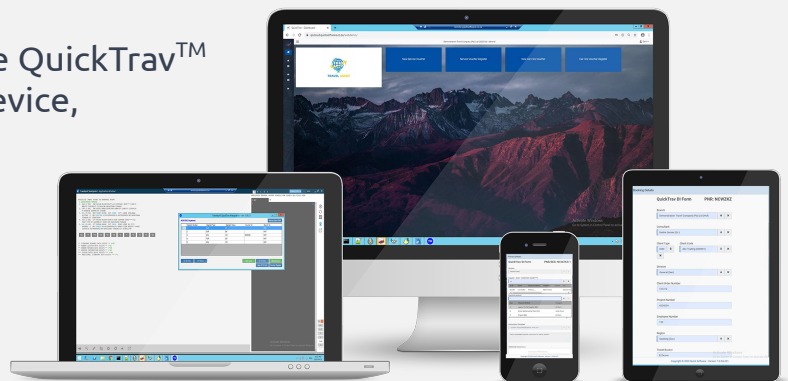

- One comprehensive dashboard granting access to Invoicing, Car & Hotel Vouchers
- Booking info which allows you to validate accounting info against a PNR
- Invoice & Voucher Registers
- Imported ticket register
- Division / ITC Mode – Allows Limiting data to specific ITC's
- Extended search functionality across all registers
- Charts & Insights

Flexibility at its best, the web based application operates alongside the legacy Win32 QuickTrav™ application. The structure of the user interface is similar, which ensures a smooth transition and maximum adaptability.

With a responsive web browser interface, the QuickTrav™ Web Application works effortlessly on any device, including:

- Desktops
- Laptops
- Tablets
- Smartphones

Access anywhere, anytime, when configured for external access, the Web based solution allows consultants to operate outside the agency's office, making it the ideal solution for working from home users, and issuing after hours documents.
